

LILIAN OUVARD

Web development student

I'm a young French graduate, motivated, wheeling to put his experiences acquired throughout his studies and those acquired in a company, within a web development company.

Physics chemistry

Mathematics

History, geography lessons

Philosophy lessons

Engineering sciences

Computer sciences

INTERESTS

Badminton & Team sports

I have played many team sports, including badminton. This sport allows me to relieve the pressure of studying and working. I played it for several years in a club and today I continue this sport in my free time.

Tech Hobbies

I have always been curious, especially about computers, and I still am today. I regularly keep myself informed about the latest research and technological development.

ACHIEVEMENTS

Finish first in my university project

Achieved in 2019

During this project we had 24 hours to create a website, an advertising poster, as well as a video in English. Out of the 10 groups, we took first place.

Realization of many projects

Until today

During these years of study, and until today, I have created many websites in order to complete projects, you can find these projects on my website.

Professional integration

Achieved in 2017, 2018 and 2019

Every summer, and since I was 16 years old, I have been working in a brand creation company, so I have been able to acquire many professional skills alongside my studies.

WORK EXPERIENCES

Worker - Identilux

June - July, since 2016

Since 2016 I have been working as a worker in this brand creation company. So I am in charge of the production of the signs of different companies. I must therefore rigorously follow the different models in order to obtain the result desired by the company. Often alone and independently, I had to design the different parts of the models, then, with the help of colleagues, we combine them to obtain the entire sign. So I developed my autonomy and seriousness, but above all I learned the values of work. I was thus able to discover the real world of work within this first professional integration.

Modeler - Atelier Salomé

January 2014

My role was to design and digitally manufacture the first prototypes and 3D models of a product. Based on the main directions given by the designer, I designed the models of the future element, and more precisely different buildings. This model allowed the visualization of a potential new neighborhood, I was then in charge of creating some areas from the digital model. I then had to know the components and properties of the different materials to be used. Throughout this week, I have carried out various architectural and urban planning projects for the town hall of my home town. I needed a good manual command to finalize these projects. At the same time, I have improved my perception of 3D shapes and volumes, my precision, and my meticulousness.
